Re: New Sampler for Network Use

At the NADP Executive Committee meeting on October 19th, 2010, a new wet-deposition collector was accepted for use in the NADP/National Trends Network for collection of precipitation chemistry samples.

The new collector is the N-CON Systems Co., Inc.'s Atmospheric Deposition Sampler (Model 00-120-2, ADS/NTN). This new sampler was tested following the NADP requirements and was deemed to have met these standards and to fulfill the needs of the network. Therefore N-CON Systems ADS/NTN sampler is now acceptable for use in collecting wet deposition samples. A brochure and contact information for this sampler is attached to this memorandum.

Please direct any additional questions to the NADP Program Office.
